

How Microsoft
is combating
abusive
AI-generated
content

①

We're building a robust safety architecture at the AI platform, model, and application levels.

②

We're **developing disclosure methods** to help consumers understand whether digital content was created or edited with AI.

3

We're *safeguarding*
our services from
abusive content through
cutting-edge tools and
policies.

④

We're collaborating with other industry members, governments, and civil society to advance a safer digital ecosystem.

⑤

We're **building awareness and education** to help ensure a well-informed public.

⑥

We're **championing modernized legislation** that keeps pace with advances in synthetic content.
